in its most general form, the electronic engine control system consists of four separate components: control head — the control head is the means by which the boat operator commands the eec system. . engine processor— the engine processor is the heart of the system and controls operation of all the other components. **f-15 digital electronic engine control system description ...** - a digital electronic engine control (deec) system has been developed by pratt and whitney aircraft for use on the floo-pw-100 turbofan engine. this control system has full authority control, capable of moving all the controlled variables over their full ranges. **tf-2004-03 dfrc digital electronic engine control - nasa** - and had full control authority over a variety of engine functions. deec performance improvements included faster throttle responses, improved air-start capability, an altitude increase of over 10,000 feet in afterburner nasa's f-15 research aircraft was used to test the digital electronic engine control (deec) unit in a program conducted by **electronic throttle control systems in toyota consumer ...** - !it is frequently possible to determine whether an electronic throttle control system is used in an engine in a specific vehicle once the make, the model, the model year, and the corresponding toyota engine family are identified. toyota has referred to such systems as "electronic throttle control system-intelligent" or "etcs-i." **engine technology electronic engine management: key ...** - electronic engine management: key technology for intelligent engine control engine control center legislators all over the world are specifying in creasingly tougher emissions limits for diesel engines. to comply with the requirements, emis sions from the drive system are constantly being reduced. as the engine's brain, the engine man **table of contents engine management systems** -
